

NETWORK & SYSTEM ENGINEER

BEng / MEng, BSc / MSc (M/F) (ref. SWICT-1812)

YOUR ACTIVITIES

For our software Engineering & ICT department, we are actively looking for a Network & System Engineer. In a motivated and innovative team, you will participate in the evolution, maintenance, and support our growing network infrastructure and server environment.

In our innovation-oriented team, we expect you to :

- maintain the defined infrastructure to keep a high level of service availability
- participate to the definition of customers and global infrastructure in order to provide dedicated or hosted services
- document all required processes, interventions and SLA report using the ticketing and the monitoring systems of company to provide internal and external visibility
- pro-actively enrich the knowledge of the team and the department making a frequent technology survey
- provide day-to-day assistance to developers within a DevOps team

YOUR PROFILE & KNOWLEDGE

- Excellent knowledge in the Linux and Windows server operating systems
- Excellent knowledge in DevOps tools (Puppet, Foreman, Ansible, Jenkins, Mesos, Marathon, ELK, Docker...) to support development team
- Proficiency in support of PostgreSQL, OpenLDAP, Tomcat, Apache, Nginx and RabbitMQ software
- Good experience in the management of windows 2016 infrastructure (AD, FS, SUS, WDS, Office365...) and attached Microsoft products
- Good experience in python development and other scripting languages
- Experience in the Support of End-Users (level 1 but mainly level 2)
- Good knowledge in the Cisco Network components (Router, Firewall, and switches)
- Experience in the network routing and switching (IPv4 & IPv6)
- Experience in the update management and monitoring for servers and network components (Centreon, Nagios)
- Fluent English and French in both writing and speaking
- Good experience in the standard software (Internet, MS Office, Visio)

YOUR FUTURE

Be part of a dynamic team working on both project and product development :

- participate in product development from conception through design to validation and gain project experience
- get the opportunity to develop your skills in adjacent fields
- join a stimulating and entrepreneurial work environment
- be offered a salary package commensurate with your background
